

STELLITE ALLOY 190

Characteristics.

- Alloys composed of different proportions of cobalt, nickel, iron, aluminum, boron, carbon, chromium, manganese, molybdenum, phosphorus, sulfur, silicon, and titanium.
- There are different grades and most of the alloys get to have from 4 to 6 of these elements.
- It's a hard coating alloy created to enhanced resistance to metal wearing.
- Resistant to rust, abrasion, and corrosion.
- Used in different applications: machinery parts resistant to acids, lathe tool fabrication, pump sleeves, rotary seal rings, saw blades, turbine blades, etc.

Stellite Alloy 190

- Cobalt-chromium alloy and high carbon content.
- Recommended for severe abrasive environments.
- Avoid usage in conditions that implicate severe mechanical or thermal shock.

STELLITE ALLOY 190

Shape or Presentation

- Bar
- Welding wire
- Powder
- Electrods
- Cast parts, etc.

Chemical Composition %

| Со | Ni | Fe | С |
|---------|------|---------|-----|
| Balance | 10.5 | 2.5 max | 3.3 |
| Cr | Mn | Si | w |
| 26 | 0.5 | 1 | 14 |
