

# STELLITE ALLOY 712

## Characteristics.

- Alloys composed of different proportions of cobalt, nickel, iron, aluminum, boron, carbon, chromium, manganese, molybdenum, phosphorus, sulfur, silicon, and titanium.
- There are different grades and most of the alloys get to have from 4 to 6 of these elements.
- It's a hard coating alloy created to enhanced resistance to metal wearing.
- Resistant to rust, abrasion, and corrosion.
- Used in different applications: machinery parts resistant to acids, lathe tool fabrication, pump sleeves, rotary seal rings, saw blades, turbine blades, etc.

## Stellite Alloy 712

- Here tungsten is substituted with molybdenum.
- Noticeable resistance to corrosion in reducing environments.
- Higher resistance to wearing.

# STELLITE ALLOY 712

## Shape or Presentation

- Bar
- Welding wire
- Powder
- Electrodes
- Cast parts, etc.

## Chemical Composition %

Co	Ni	Fe	C
Balance	3 max	3 max	1.85
Cr	Mn	Si	W
29	0.5	0.5	9
